

# Belmont Special School

NEW BUILD SOFT PLAY ROOMS & OBSERVATION AREA

## KEY BENEFITS

- Timely delivery
- Delivery in 'live' environment
- Landscaping on completion

## DURATION

July 20 - Oct 20

## The solution

A new extension was constructed at Belmont Special School and linked to the existing building. Designed with high ceilings to accommodate a soft play facility, the building has been specified with an acoustic ceiling, a fitted kitchen for preparing light refreshments and an observation area. A sensory area was also created in a refurbished adjoining building. The new facility is completely independent of main school so can be used for generating revenue through private hire.

Designed by Roberts Limbrick, the steel framed building with a 'helping hand' support system to suspend the Cem Brick board was constructed in a live environment. Snape Contracting Groundworks undertook the groundworks and installed a new vortex flow chamber and attenuation tanks to help with storm water run off.
